

Trenton Town 1600 South chip-seal

2019 COG Application

Project
Location:

1600 South

- Trenton has a total of 8.18 paved miles. This project will impact approximately 1.25 miles, 16% of total paved roads in Trenton.
- In 2017 COG awarded \$140,656.91 to pulverize and resurface 1600 South, the work was completed in the summer of 2018.
- Common road maintenance standards suggest that within two years of installing a new asphalt road a chip seal should be done.
- COG projects now allow for this multi-year process to be figured into an application. This project is a continuation of the project awarded in 2017.
- The estimated cost of this project is \$64,450. Trenton has requested \$57,000 from COG.
